

**We Sell Well to Those
We Reach.. But We
Don't Reach Everyone.**

**Strategic Analysis of Markets
and Customer Base Expansion.**

DataCo Global company

Behind the Numbers: Why Do Some Markets Out perform Others?

The Discount Illusion

Zero price elasticity: Sales volume is independent of discount rates.

Customer Quality

Global purchasing power is consistent (avg. \$554); customer quality is not the issue.

The Only Growth Driver:

Market performance gap is driven solely by the scale of customer acquisition.

Customer Behavior: No Qualitative Difference

Similar Preferences

Consistent across all segments (Consumer, Corporate, and Home Office)

Geographic Influence

Stable distribution patterns have zero impact on segment behavior.

Quantitative Variation Only

Driven solely by customer base size, not by specific needs or location.

From "Ineffective Discounts" to "Growth Engine"

Capital Reallocation

Invest 50% of discount savings (\$1.1M) directly into emerging market acquisition campaigns.

Expansion Model

Replicate successful channels (e.g., LATAM) across low-activity regions.

Unified Marketing

Unify marketing campaigns across all segments, leveraging consistent customer behavior.

Return on Investment: New Revenue & Net Profit

+4M\$

New revenues expected

+7,300

New Customers in Emerging
Markets

370%

Return on Investment (ROI)

1.1M\$

Discount savings redirected to acquisition campaigns

Spending efficiency will reduce operational costs while maximizing
net profits.

Is It Time to Redefine Our Standards?

Revisiting current customer classification criteria is a strategic necessity to focus on quantitative growth.

Let us start converting lost revenue into sustainable profits.

The numbers don't lie..
Excessive discounts may
be the biggest obstacle
to company growth.

Have you faced the
challenge of turning
ineffective costs into
growth investments?
